Summary

Business analyst who builds automation. I design and run the automation stack of a hotel in Kerala: AI agents that turn OTA booking emails into structured bookings, automated WhatsApp guest messaging, a multilingual AI concierge backed by a RAG knowledge base, and self-hosted infrastructure. Background in data analytics (Python, SQL, Power BI) across hospitality, HR and tech, with an MSc from Toulouse Business School and an engineering degree.

Skills

- **Automation & AI:** n8n · AI agents (Gemini, DeepSeek) · prompt design & structured outputs · RAG & vector search (Supabase pgvector) · speech-to-text (Whisper) · REST APIs · webhooks · WhatsApp Cloud API · Razorpay
- **Build & infrastructure:** JavaScript (n8n Code) · JSON · Supabase · Lovable · Docker · Caddy (HTTPS) · DigitalOcean
- **Data & BI:** Python · SQL · Power BI · Tableau · Dataiku · Excel/VBA
- **Business systems:** Workday HCM · HubSpot · Jira · Agile
- **Languages:** English (fluent) · French (professional) · Hindi (fluent) · Malayalam (native)

Experience

Operations & Automation Lead (Remote)

Grand Victoria Hotel, Kerala, India · Dec 2025 – Present

- Designed and run an n8n automation stack, self-hosted on DigitalOcean with Docker and HTTPS, handling bookings, guest messaging and alerts for a 17-room hotel.
- Built an AI email pipeline (n8n + Gemini, with a DeepSeek fallback) that extracts bookings and cancellations from MakeMyTrip, Goibibo and Agoda emails and creates them through an API in the central booking system, replacing manual entry.
- Automated the guest journey on the WhatsApp Cloud API: booking confirmations, pre-arrival reminders and post-stay review requests, with send status tracked per guest.
- Built a staff booking portal (Lovable, Supabase) with a calendar, overbooking prevention and secured APIs used by the automations.
- Built and piloting a multilingual AI WhatsApp concierge that answers text and voice notes (Groq Whisper) from the hotel's own FAQ through a RAG knowledge base (Supabase pgvector, Gemini embeddings), with conversation memory, structured outputs and automatic staff alerts for booking requests.
- Built an LLM-as-a-judge evaluation for the concierge (30 test cases incl. 10 hallucination traps and a prompt-injection test); raised the trap pass rate from 70% to 100% by fixing the bot prompt and a judge bias, with 100% accuracy on FAQ questions.
- Diagnosed missed-booking incidents and added reliability layers: retries, fallback AI models and an error-alert workflow covering all automations.
- Set up reservation tracking and management reporting for the property's launch.

Sales & Marketing Analyst

Geminy Group, Kerala, India · Mar 2024 – Mar 2025

- Built daily Excel and Power BI dashboards tracking bookings, occupancy, ADR and RevPAR for 6–8 operational users, supporting daily revenue and operations decisions.
- Automated data preparation with a Python ETL merging OTA CSVs and PMS exports, plus Excel/VBA summary emails to stakeholders.
- Drove a 6–8% relative improvement in OTA conversion (Jun–Nov 2024, ~300 OTA bookings/month).
- Raised repeat-guest share from ~38% to ~40% using SQL repeat-guest flags and cohort analysis to target retention campaigns.

Sales & Marketing Intern

Estrad Services, Toulouse, France · Sep 2023 – Mar 2024

- Built HubSpot workflows for lead segmentation and scoring, and targeted email campaigns that improved engagement by ~20%.
- Gathered business requirements and market research for an e-learning platform, informing positioning and go-to-market decisions.
- Delivered weekly campaign and lead-conversion reports to sales and marketing.

HR Business Analyst Intern

International Justice Mission, Washington, USA · Apr 2022 – Aug 2022

- Supported Workday HCM updates and light integrations; ran ~25–30 UAT test cases affecting ~120–150 users.
- Built ~10–12 Workday reports and automated weekly HR dashboards with Python data-cleaning scripts.
- Reduced recurring data errors by ~15–20% and cut monthly reporting time by ~3–4 hours.

Projects

- **Direct booking & payments prototype, Modern Rooms (Kerala)** (Oct 2026): booking site (Lovable, Supabase) with Razorpay checkout in test mode; bookings confirmed only by a signature-verified webhook; confirmation emails sent through n8n over a self-hosted HTTPS endpoint. Built as the blueprint for commission-free direct booking.
- **AI churn prediction prototype** (Dec 2022 – Jan 2023): Logistic Regression, Random Forest and Gradient Boosting on ~8–12k records; Tableau dashboard showing churn drivers and 2.0–2.4× top-decile lift.
- **Hackathon winner, Uwin Bikes** (Dec 2022): led a 5-person team building a mobile app prototype for onboarding and ride tracking.

Education

- **MSc, Big Data, Marketing & Management**, Toulouse Business School · 2021 – 2024
- **BEng, Electronics & Communication Engineering**, MBCET · 2016 – 2020
- **Professional French & Workplace Integration**, SJT Argenteuil · Jun – Dec 2025
